Understanding Scientific Theories of Origins *Cosmology, Geology, and Biology in Christian Perspective*

December 4, 2018 | \$75, 650 pages, casebound | 978-0-8308-5291-8

From five authors with over two decades of experience teaching origins together in the classroom, this is the first textbook to offer a full-fledged discussion of the scientific narrative of origins starting with the Big Bang through humankind, from biblical and theological perspectives. This work gives the reader a detailed picture of mainstream scientific theories of origins along with how they fit into the story of God's creative and redemptive action.

BioLogos Books on Science and Christianity

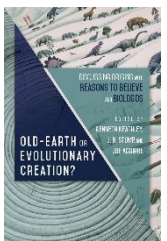

BioLogos Books on Science and Christianity, a partnership between BioLogos and IVP Academic, aims to advance this mission by publishing a range of titles from scholarly monographs to textbooks to personal stories. The books in this series have wide appeal among Christian audiences, from non-specialists to scholars in the field. While the authors address a range of topics on science and faith, they support the view of evolutionary creation which sees evolution as our current best scientific description of how God brought about the diversity of life on earth. The series authors are faithful Christians and leading scholars in their fields.

How I Changed My Mind About Evolution: Evangelicals Reflect on Faith and Science

Edited by Kathryn Applegate and J. B. Stump, foreword by Deborah Haarsma

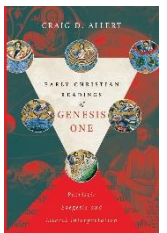

Perhaps no topic appears as potentially threatening to evangelicals as evolution. Yet many evangelicals have reconciled their firm beliefs in God and the Bible with the conclusions of science. How? Here are the stories of over two dozen evangelical scientists, pastors, biblical scholars, and theologians who have come to embrace both evolution and faith.

Old-Earth or Evolutionary Creation? Discussing Origins with Reasons to Believe and BioLogos

Edited by Kenneth Keathley, J. B. Stump, and Joe Aguirre

Christians confess that God created the heavens and the earth. But just how did he do it, and does the Bible give us a scientifically accurate account? Listen in as representatives from Reasons to Believe (old-earth creation) and BioLogos (evolutionary creation) engage in charitable dialogue on questions of creation and evolution.

Early Christian Readings of Genesis One: Patristic Exegesis and Literal Interpretation

by Craig D. Allert

Do the writings of the church fathers support a literalist interpretation of Genesis 1? Young earth creationists have maintained that they do. But are we correctly representing the Fathers and their concerns? This study from Craig Allert resets our understanding of early Christian interpretation and considers whether contemporary evangelicals may be more bound to modernity in our reading of Genesis 1 than we realize.
